Sharp Flush Cutter Pliers - Wire/Soft Flex, [XTL-5511] Beadsmith Jeweller's Micro Pliers

Chain Nose Flat Nose

Instructions

These instructions will give you a 7 inch bracelet. Simply modify the length of leather to adjust the length.

1. Cut the leather into three equal lengths of 1 foot each.
2. Thread them through the three holes of the leather end cap. Crimp the three spaces of the cord end using the needle nose end of the Xuron 4 in 1 crimping pliers. You can see a similar technique [here](#).
3. Slide one silver bead over all three cords and slide down to about 1 inch from the cord end.
4. Take the center cord and thread on one geode bead. Then thread all three cords through another silver bead. Repeat this step twice more.
5. Thread the cords through the cord ends as you did on the other side. Before you clip the leather, this is the point to adjust the size and length of your bracelet. Note that the clasp adds about 1 inch to the overall length.
6. Once you have the size you want trim the leather cords and crimp them into the leather cord end.
7. Open one jump ring and attach one side of the leather clasp to the magnetic clasp. Close the jump ring. Move to the other side of the bracelet and attach another jump ring to the other cord end.
