

## Isolde's Guard Ring

Project R609  
Designer: Esther Lee

Which is a more powerful protector - undying love or a shield? This ring has them both, a beautiful raised heart and a sturdy metal shield are the centerpieces to this striking ring. The perfect ring for a romantic!

### What You'll Need

Nunn Design Antiqued Silver Plated Pewter Round Glue-On Adjustable Ring

SKU: FRG-0717  
Project uses 1 piece

SKU: PND-0138  
Project uses 1 piece

E6000 Industrial Strength Glue Adhesive (0.18 fl oz)

SKU: XTL-1054  
Project uses 1 piece

### Specialized Tools

10 Piece 4 Inch Precision Diamond Needle File Set

SKU: XTL-0102

Eurotool Clear Safety Glasses With Dark Blue Adjustable Frame

SKU: XTL-0170

### Instructions:

NOTE: You will need to use your household utility wire cutters for this project. Do not use your good jewelry making cutters, the metal is too strong and will most likely cause permanent damage to them.

1. Begin this project by putting on your safety goggles, and using your household wire cutters, snip off the button shank as close to the back, flat-side of the button as possible. You will most likely not be able to remove the entire shank, but just part of it.
2. Using your diamond file, carefully file down the remaining shank remnant on the back of your button. I found it easiest to turn the button upside down and cradle it in a tea towel, this helped me hold onto the button better and also helped with the filing. Keep sanding it down until you have a smooth back side to the button without any remnant of the shank remaining.
3. Once you have fully filed down the last remnants of the shank, place a dab of E6000 on the flat glue-on tab of the ring. Flip the ring over, center, and press into place on the backside of your button.
4. Hold in place firmly for 30 seconds and then prop up so that it does not tip over and let dry for several hours.
5. Enjoy!
